Allgemeines

Sicherheit

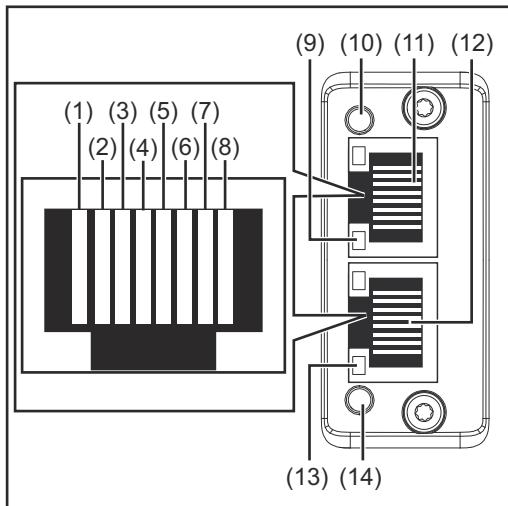

WARNUNG!

Fehlbedienung und fehlerhaft durchgeführte Arbeiten können schwerwiegende Personen- und Sachschäden verursachen.

Alle in diesem Dokument beschriebenen Arbeiten und Funktionen dürfen nur von geschultem Fachpersonal ausgeführt werden, wenn folgende Dokumente vollständig gelesen und verstanden wurden:

- ▶ dieses Dokument
- ▶ die Bedienungsanleitung des Roboterinterface "RI FB Inside/i"
- ▶ sämtliche Dokumente der Systemkomponenten, insbesondere Sicherheitsvorschriften

Anschlüsse und Anzeigen am RJ 45 Modul

| | |
|------|---|
| (1) | TX+ |
| (2) | TX- |
| (3) | RX+ |
| (6) | RX- |
| (4) | Normalerweise nicht verwendet; um die Signalvollständigkeit sicherzustellen, sind diese Pins miteinander verbunden und enden über einen Filterkreis am Schutzleiter (PE). |
| (5) | |
| (7) | |
| (8) | |
| (9) | LED Verbindung/Aktivität Anschluss 2 |
| (10) | LED MS (Modulstatus) |

| | |
|------|--------------------------------------|
| (11) | RJ 45 Ethernet Anschluss 2 |
| (12) | RJ 45 Ethernet Anschluss 1 |
| (13) | LED Verbindung/Aktivität Anschluss 1 |
| (14) | LED NS (Netzwerkstatus) |

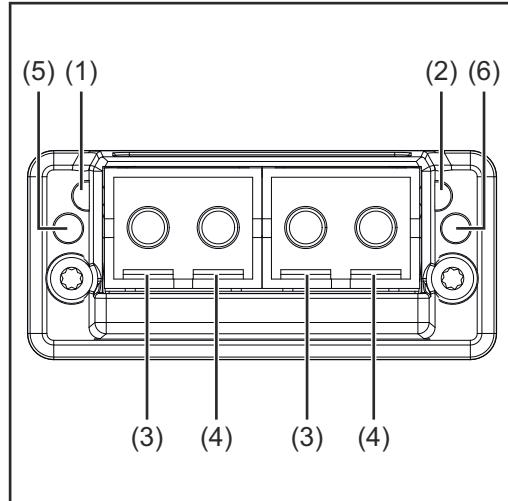

| LED Netzwerkstatus | |
|-------------------------|--|
| Status | Bedeutung |
| Aus | Offline; keine Spannungsversorgung oder keine Verbindung mit IO Controller |
| Leuchtet grün | Online (RUN); Verbindung mit IO Controller hergestellt, IO Controller in Betrieb |
| Blinkt grün (einmal) | Online (STOP); Verbindung mit IO Controller hergestellt, IO Controller nicht in Betrieb, IO-Daten fehlerhaft, IRT-Synchronisation nicht fertiggestellt |
| Blinkt grün (dauerhaft) | Von Engineering-Tools verwendet, um den Netzwerk-Knoten zu identifizieren |

| LED Netzwerkstatus | |
|----------------------|--|
| Status | Bedeutung |
| Leuchtet rot | das Modul hat einen schweren internen Fehler festgestellt |
| Blinkt rot (einmal) | Stationsname nicht gesetzt |
| Blinkt rot (zweimal) | IP-Adresse nicht gesetzt |
| Blinkt rot (dreimal) | Konfigurationsfehler; erwartete Identifikation stimmt nicht mit der tatsächlichen Identifikation überein |

| LED Modulstatus | |
|-----------------------------------|---|
| Status | Bedeutung |
| Aus | keine Versorgungsspannung oder Modul im Setup- oder Initialisierungs-Modus |
| Leuchtet grün | normaler Betrieb |
| Blinkt grün (einmal) | Diagnoseprozess läuft |
| Leuchtet rot | Ausnahmezustand, schwerer Fehler, etc. |
| Leuchtet abwechselnd rot und grün | Firmwareupdate. Während des Updates das Modul nicht von der Spannungsversorgung trennen - dies könnte Schäden am Modul zur Folge haben! |

| LED Verbindung/Aktivität | |
|--------------------------|---|
| Status | Bedeutung |
| Aus | Keine Verbindung, keine Aktivität |
| Leuchtet grün | Verbindung hergestellt, keine Aktivität |
| Flackert grün | Verbindung hergestellt, Aktivität vorhanden |

Anzeigen am Fiber Optic (FO) Modul

| | |
|-----|--|
| (1) | LED Netzwerkstatus |
| (2) | LED Modulstatus |
| (3) | Optisches Signal vom Anybus CompactCom Modul |
| (4) | Optisches Signal vom Anybus CompactCom Modul |
| (5) | LED Verbindung/Aktivität, Anschluss 1 |
| (6) | LED Verbindung/Aktivität, Anschluss 2 |

| LED Netzwerkstatus | |
|--------------------|--|
| Status | Bedeutung |
| Aus | Offline; keine Spannungsversorgung oder keine Verbindung mit IO Controller |

| LED Netzwerkstatus | |
|-------------------------|--|
| Status | Bedeutung |
| Leuchtet grün | Online (RUN); Verbindung mit IO Controller hergestellt, IO Controller in Betrieb |
| Blinkt grün (einmal) | Online (STOP); Verbindung mit IO Controller hergestellt, IO Controller nicht in Betrieb, IO-Daten fehlerhaft, IRT-Synchronisation nicht fertiggestellt |
| Blinkt grün (dauerhaft) | Von Engineering-Tools verwendet, um den Netzwerk-Knoten zu identifizieren |
| Leuchtet rot | das Modul hat einen schweren internen Fehler festgestellt |
| Blinkt rot (einmal) | Stationsname nicht gesetzt |
| Blinkt rot (zweimal) | IP-Adresse nicht gesetzt |
| Blinkt rot (dreimal) | Konfigurationsfehler; erwartete Identifikation stimmt nicht mit der tatsächlichen Identifikation überein |

| LED Modulstatus | |
|-----------------------------------|---|
| Status | Bedeutung |
| Aus | keine Versorgungsspannung oder Modul im Setup- oder Initialisierungs-Modus |
| Leuchtet grün | normaler Betrieb |
| Blinkt grün (einmal) | Diagnoseprozess läuft |
| Leuchtet rot | Ausnahmezustand, schwerer Fehler, etc. |
| Leuchtet abwechselnd rot und grün | Firmwareupdate. Während des Updates das Modul nicht von der Spannungsversorgung trennen - dies könnte Schäden am Modul zur Folge haben! |

| LED Verbindung/Aktivität (5+6) | |
|--------------------------------|---|
| Status | Bedeutung |
| Aus | Keine Verbindung, keine Aktivität |
| Leuchtet grün | Verbindung hergestellt, keine Aktivität |
| Flackert grün | Verbindung hergestellt, Aktivität vorhanden |

Eigenschaften der Datenübertragung

Übertragungstechnik:
Ethernet

Medium:

Bei der Auswahl der Kabel, Stecker und Abschluss-Widerstände ist die Profinet Montagerichtlinie für die Planung und Installation von Profinet Systemen zu beachten.

Seitens Hersteller wurden die EMV-Tests mit dem Kabel IEC-C5DD4UG-G0150A20A20-E durchgeführt.

Seitens Hersteller wurden die EMV-Tests mit einer Buszykluszeit von 32ms durchgeführt.

Übertragungs-Geschwindigkeit:
100 Mbit/s, Full-Duplex-Mode

Busanschluss:

Ethernet RJ45 / SCRJ (Fiber Optic)

Konfigurationsparameter

Bei einigen Roboter-Steuerungen kann es erforderlich sein die hier beschriebenen Konfigurationsparameter anzugeben, damit das Busmodul mit dem Roboter kommunizieren kann.

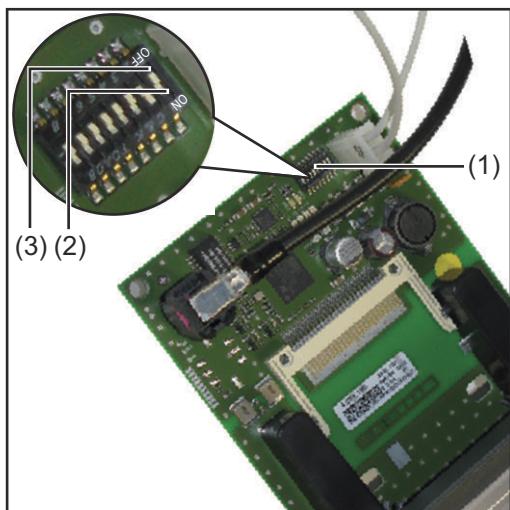

| Parameter | Wert |
|--------------|--|
| Device ID | 0301 _{hex} (769 _{dez}) Fronius ProfiNet IO 2-Port |
| Vendor ID | 01B0 _{hex} (432 _{dez}) Fronius International GmbH |
| Station Type | fronius-fb-inside-pn-2p |

Die folgenden Parameter geben Detailinformationen über das Busmodul. Auf die Daten kann durch den Profibus-Master mittels azyklischer Lese/Schreib-Dienste zugegriffen werden.

| Parameter | Wert |
|--------------------------|--|
| IM Manufacturer ID | 01B0 _{hex} (432 _{dez}) Fronius International GmbH |
| IM Order ID | 4.044.014 |
| IM Revision Counter | 0001 _{hex} (1 _{dez}) |
| IM Profile ID | F600 _{hex} (62976 _{dez}) Generic Device |
| IM Profile Specific Type | 0004 _{hex} (4 _{dez}) No profile |
| IM Version | 0101 _{hex} (257 _{dez}) |
| IM Supported | 0000 _{hex} (0 _{dez}) IMO supported |

Roboter-Interface konfigurieren

Funktion DIP-Schalter

Der DIP-Schalter (1) am Roboter-Interface RI FB Inside/i dient zur Einstellung

- der Prozessdaten-Breite
- der Knotenadresse / IP-Adresse

Werksseitig sind alle Positionen des DIP-Schalters in der Stellung OFF (3). Das entspricht dem binären Wert 0.

Die Stellung ON (2) entspricht dem binären Wert 1.

Konfiguration der Prozessdaten-Breite

| DIP-Schalter | | | | | | | | | Konfiguration |
|--------------|-----|---|---|---|---|---|---|--|---|
| 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 | | |
| OFF | OFF | - | - | - | - | - | - | | Standard Image 320 Bit |
| OFF | ON | - | - | - | - | - | - | | Economy Image 128 Bit |
| ON | OFF | - | - | - | - | - | - | | Retro Fit Umfang abhängig von Busmodul |
| ON | ON | - | - | - | - | - | - | | Nicht verwendet |

Über die Prozessdaten-Breite wird der Umfang der übertragenen Datenmenge definiert.

Welche Datenmenge übertragen werden kann ist abhängig von

- der Roboter-Steuerung
- der Anzahl der Schweißgeräte
- der Art der Schweißgeräte
 - „Intelligent Revolution“
 - „Digital Revolution“ (Retro Fit)

Knotenadresse einstellen mit DIP-Schalter (Beispiel)

| DIP-Schalter | | | | | | | | | Knotenadresse |
|--------------|---|-----|-----|-----|-----|-----|-----|--|---------------|
| 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 | | |
| - | - | OFF | OFF | OFF | OFF | OFF | ON | | 1 |
| - | - | OFF | OFF | OFF | OFF | ON | OFF | | 2 |
| - | - | OFF | OFF | OFF | OFF | ON | ON | | 3 |
| - | - | ON | ON | ON | ON | ON | OFF | | 62 |
| - | - | ON | ON | ON | ON | ON | ON | | 63 |

Die Knotenadresse wird mit den Positionen 1 bis 6 des DIP-Schalters eingestellt.
Die Einstellung erfolgt im Binärformat. Das ergibt einen Einstellbereich von 1 bis 63 im Dezimalformat

HINWEIS!

Nach jeder Änderung der DIP-Schalter Einstellungen ist ein Neustart des Interface durchzuführen, damit die Änderungen wirksam werden.

(Neustart = Unterbrechen und Wiederherstellen der Spannungsversorgung oder Ausführen der entsprechenden Funktion auf der Webseite des Schweißgerätes)

- IP-Einstellungen** Bei Auslieferung ist über die DIP-Schalter die Knotenadresse 0 eingestellt. Das entspricht folgenden IP-Einstellungen:
- IP-Adresse: 0.0.0.0
 - Subnet-Mask: 0.0.0.0
 - Default-Gateway: 0.0.0.0

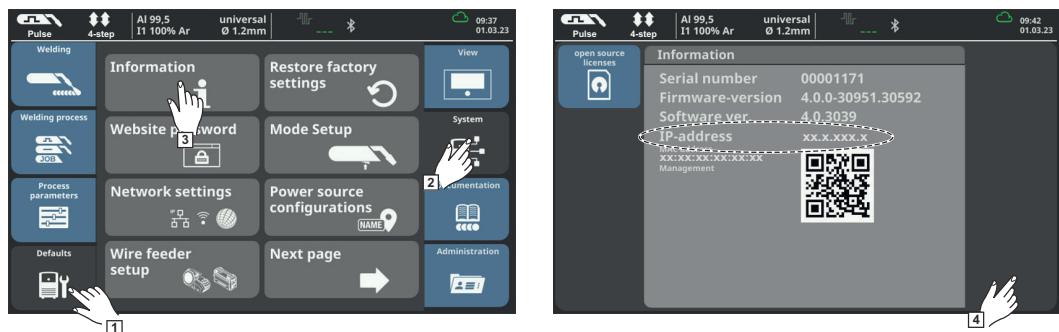

Bei ProfiNet wird die Vergabe der IP-Adresse, der Subnet-Mask und des Default-Gateways vom Master durchgeführt. Auch ein Gerätename wird dem Interface vom Master zugewiesen.

- Die Webseite des Schweißgerätes** Das Schweißgerät verfügt über eine eigene Webseite, den SmartManager. Sobald das Schweißgerät in einem Netzwerk integriert ist, kann der SmartManager über die IP-Adresse des Schweißgerätes aufgerufen werden.

Abhängig von Anlagenkonfiguration und Software-Erweiterungen enthält der SmartManager folgende Einträge:

- Übersicht
- Update
- Screenshot
- Sichern & Wiederherstellen
- Funktionspakete
- Job-Daten
- Kennlinienübersicht
- RI FB INSIDE/i

SmartManager des Schweißgerätes aufrufen und anmelden

- [1] Voreinstellungen / System / Information ==> IP-Adresse des Schweißgerätes notieren
- [2] IP-Adresse im Suchfeld des Browsers eingeben
- [3] Benutzername und Kennwort eingeben

Werkseinstellung:
Benutzername = admin
Kennwort = admin

- [4] Angezeigten Hinweis bestätigen

Der SmartManager des Schweißgerätes wird angezeigt.

Ein- und Ausgangssignale

| | |
|------------------------------|---|
| Datentypen | Folgende Datentypen werden verwendet: - UINT16 (Unsigned Integer) Ganzzahl im Bereich von 0 bis 65535 - SINT16 (Signed Integer) Ganzzahl im Bereich von -32768 bis 32767 |
| Umrechnungsbeispiele: | <ul style="list-style-type: none">- für positiven Wert (SINT16) z.B. gewünschter Drahtvorschub x Faktor $12.3 \text{ m/min} \times 100 = 1230_{\text{dez}} = 04CE_{\text{hex}}$- für negativen Wert (SINT16) z.B. gewünschte Lichtbogen-Korrektur x Faktor $-6.4 \times 10 = -64_{\text{dez}} = FFC0_{\text{hex}}$ |

Verfügbarkeit der Eingangssignale Die nachfolgend angeführten Eingangssignale sind ab Firmware V4.1.x bei allen Inside/i-Systemen verfügbar.

Eingangssignale
(vom Roboter
zum
Schweißgerät)

| Adresse | | | | Signal | Aktivität / Datentyp | Bereich | Faktor | Prozess-Image | |

General

Safety

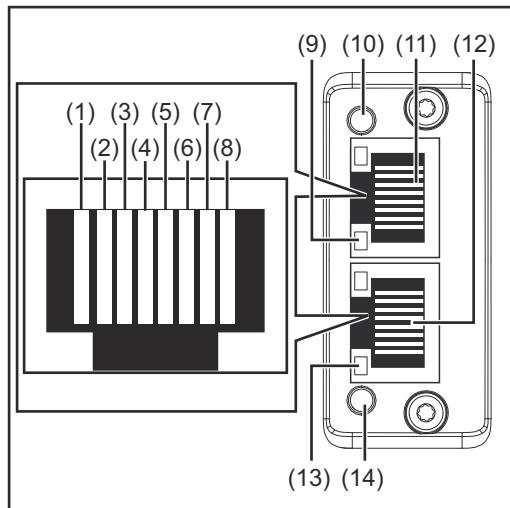

WARNING!

Incorrect operation and faulty work can cause serious personal injury and material damage.

All work and functions described in this document must be performed only by trained specialist personnel who have read and understood the following documents in full:

- ▶ this document
- ▶ the Operating Instructions of the robot interface "RI FB Inside/i"
- ▶ all documents relating to system components, especially the safety rules

Connections and indicators on RJ 45 module

| | |
|------|---|
| (1) | TX+ |
| (2) | TX- |
| (3) | RX+ |
| (6) | RX- |
| (4) | Not normally used; to ensure signal completeness, these pins must be interconnected and, after passing through a filter circuit, must terminate at the ground conductor (PE). |
| (5) | |
| (7) | |
| (8) | |
| (9) | Connection/activity LED, connection 2 |
| (10) | MS LED (module status) |

| | |
|------|---------------------------------------|
| (11) | RJ-45 Ethernet connection 2 |
| (12) | RJ-45 Ethernet connection 1 |
| (13) | Connection/activity LED, connection 1 |
| (14) | NS LED (network status) |

Network Status LED

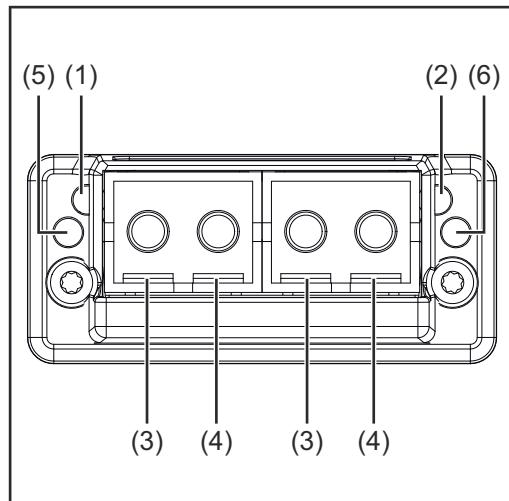

| Status | Meaning |
|-----------------------------|--|
| Off | Offline; no power supply or no connection with IO Controller |
| Lights up green | Online (RUN); connection with IO Controller established, IO Controller in operation |
| Flashes green (once) | Online (STOP); connection with IO Controller established, IO Controller not in operation, IO data defective, IRT synchronization not ready |
| Flashes green (permanently) | In use by engineering tools in order to identify network nodes |

| Network Status LED | |
|---------------------------|---|
| Status | Meaning |
| Lights up red | The module has identified a serious internal fault |
| Flashes red (once) | Station name not set |
| Flashes red (twice) | IP address not set |
| Flashes red (three times) | Configuration error; expected identification does not match the actual identification |

| Module Status LED | |
|-------------------------------------|--|
| Status | Meaning |
| Off | No supply voltage or module in the setup or initialization mode |
| Lights up green | Normal operation |
| Flashes green (once) | Diagnosis process running |
| Lights up red | Emergency situation, serious fault, etc. |
| Lights up green and red alternately | Firmware update. Do not disconnect the module from the power supply during the update—this could result in damage to the module. |

| Connection/Activity LED | |
|-------------------------|--|
| Status | Meaning |
| Off | No connection, no activity |
| Lights up green | Connection established, no activity |
| Flickers green | Connection established, activity present |

Indicators on Fiber Optic (FO) module

| | |
|-----|--|
| (1) | Network Status LED |
| (2) | Module Status LED |
| (3) | Optical signal from Anybus CompactCom module |
| (4) | Optical signal from Anybus CompactCom module |
| (5) | Connection/activity LED, connection 1 |
| (6) | Connection/activity LED, connection 2 |

| Network Status LED | |
|--------------------|--|
| Status | Meaning |
| Off | Offline; no power supply or no connection with IO Controller |

| Network Status LED | |
|-----------------------------|--|
| Status | Meaning |
| Lights up green | Online (RUN); connection with IO Controller established, IO Controller in operation |
| Flashes green (once) | Online (STOP); connection with IO Controller established, IO Controller not in operation, IO data defective, IRT synchronization not ready |
| Flashes green (permanently) | In use by engineering tools in order to identify network nodes |
| Lights up red | The module has identified a serious internal fault |
| Flashes red (once) | Station name not set |
| Flashes red (twice) | IP address not set |
| Flashes red (three times) | Configuration error; expected identification does not match the actual identification |

| Module Status LED | |
|-------------------------------------|--|
| Status | Meaning |
| Off | No supply voltage or module in the setup or initialization mode |
| Lights up green | Normal operation |
| Flashes green (once) | Diagnosis process running |
| Lights up red | Emergency situation, serious fault, etc. |
| Lights up green and red alternately | Firmware update. Do not disconnect the module from the power supply during the update—this could result in damage to the module. |

| Connection/activity LED (5+6) | |
|-------------------------------|--|
| Status | Meaning |
| Off | No connection, no activity |
| Lights up green | Connection established, no activity |
| Flickers green | Connection established, activity present |

Data Transfer Properties

Transfer technology:
Ethernet

Medium

When selecting the cable, plug, and terminating resistors, the Profinet assembly guideline for the planning and installation of Profinet systems must be observed.

The EMC tests were carried out by the manufacturer with the cable IEC-C5D-D4UGG0150A20A20-E.

The EMC tests were carried out by the manufacturer with a bus cycle time of 32 ms.

Transmission speed:
100 Mbit/s, full duplex mode

Bus connection:

Ethernet RJ45/SCRJ (fiber optic)

Configuration Parameters

In some robot control systems, it may be necessary to state the configuration parameters described here so that the bus module can communicate with the robot.

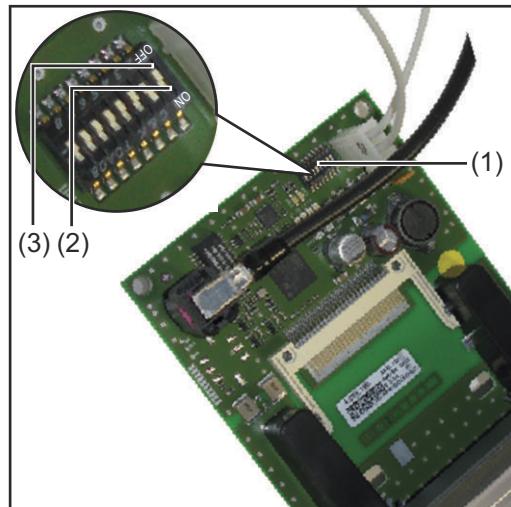

| Parameter | Value |
|--------------|--|
| Device ID | 0301 _{hex} (769 _{dec}) Fronius ProfiNet IO 2-Port |
| Vendor ID | 01B0 _{hex} (432 _{dec}) Fronius International GmbH |
| Station type | fronius-fb-inside-pn-2p |

The following parameters provide detailed information about the bus module. The Profibus master can access the data using acyclic read/write services.

| Parameter | Value |
|--------------------------|--|
| IM Manufacturer ID | 01B0 _{hex} (432 _{dec}) Fronius International GmbH |
| IM Order ID | 4.044.014 |
| IM Revision Counter | 0001 _{hex} (1 _{dec}) |
| IM Profile ID | F600 _{hex} (62,976 _{dec}) Generic Device |
| IM Profile Specific Type | 0004 _{hex} (4 _{dec}) No profile |
| IM Version | 0101 _{hex} (257 _{dec}) |
| IM Supported | 0000 _{hex} (0 _{dec}) IMO supported |

Configuration of robot interface

Dip-switch function

The dip-switch (1) on the robot interface RI FB Inside/i is used to configure
 - the process data width
 - the node address/IP address

At the factory all positions of the dip switch are set to OFF (3).
 This corresponds to the binary value 0.

The position (2) corresponds to the binary value 1.

Configuration of the process data width

| Dip switch | | | | | | | | Configuration |
|------------|-----|---|---|---|---|---|---|--|
| 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 | |
| OFF | OFF | - | - | - | - | - | - | Standard image 320 Bit |
| OFF | ON | - | - | - | - | - | - | Economy image 128 Bit |
| ON | OFF | - | - | - | - | - | - | Retro Fit Scope dependent on bus module |
| ON | ON | - | - | - | - | - | - | Not used |

The process data width defines the scope of the transferred data volume.

The kind of data volume that can be transferred depends on

- the robot controls
- the number of welding machines
- the type of welding machines
 - "Intelligent Revolution"
 - "Digital Revolution" (Retro Fit)

Set node address with dip switch (example)

| Dip switch | | | | | | | | Node address |
|------------|---|-----|-----|-----|-----|-----|-----|--------------|
| 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 | |
| - | - | OFF | OFF | OFF | OFF | OFF | ON | 1 |
| - | - | OFF | OFF | OFF | OFF | ON | OFF | 2 |
| - | - | OFF | OFF | OFF | OFF | ON | ON | 3 |
| - | - | ON | ON | ON | ON | ON | OFF | 62 |
| - | - | ON | ON | ON | ON | ON | ON | 63 |

The node address is set with positions 1 to 6 of the dip switch.
The configuration is carried out in binary format. This results in a configuration range of 1 to 63 in decimal format

NOTE!

After every change of the configurations of the dip switch settings, the interface needs to be restarted so that the changes will take effect.

(Restart = interrupting and restoring the power supply
or executing the relevant function on the website of the power source)

IP Settings

Node address 0 is set via the DIP switch on delivery. This corresponds to the following IP settings:

- IP address: 0.0.0.0
- Subnet mask: 0.0.0.0
- Default gateway: 0.0.0.0

In the case of Profinet, the assignment of the IP address, the subnet mask, and the default gateway is carried out by the master. A device name is also assigned to the interface by the master.

The Website of the welding machine

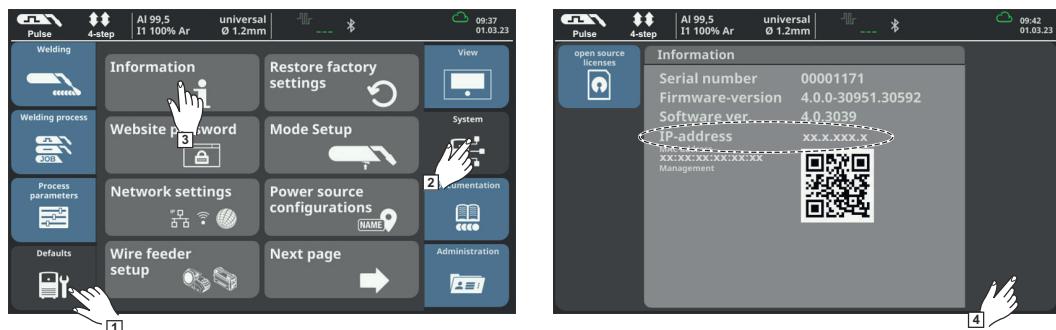

The welding machine has its own website, the SmartManager.

As soon as the welding machine has been integrated into a network, the SmartManager can be opened via the IP address of the welding machine.

Depending on the system configuration and software upgrades, the SmartManager may contain the following entries:

- Overview
- Update
- Screenshot
- Save and restore
- Function packages
- Job data
- Overview of characteristics
- RI FB INSIDE/i

Call up the welding machine SmartManager and log in

1 Presettings / System/Information ==> note down IP address of the welding machine

2 Enter the IP address into the search field of the browser

3 Enter username and password

Factory setting:

Username = admin

Password = admin

4 Confirm displayed message

The welding machine SmartManager is displayed.

Input and output signals

Data types

The following data types are used:

- **UINT16** (Unsigned Integer)
Whole number in the range from 0 to 65535
- **SINT16** (Signed Integer)
Whole number in the range from -32768 to 32767

Conversion examples:

- for a positive value (SINT16)
e.g. desired wire speed x factor
 $12.3 \text{ m/min} \times 100 = 1230_{\text{dec}} = 04CE_{\text{hex}}$
- for a negative value (SINT16)
e.g. arc correction x factor
 $-6.4 \times 10 = -64_{\text{dec}} = FFC0_{\text{hex}}$

Availability of Input Signals

The input signals listed below are available from firmware V4.1.x for all Inside/i systems.

**Input signals
(from robot to
power source)**

| Address | | | | Signal | Activity / data type | Range | Factor | Process image | |
|----------|------|----------|-----|-----------------------------|-------------------------|--|--------|--|---------|

Retrofit Image Input and Output Signals

Input Signals

The signals listed below are available from firmware V1.6.0 for all Inside/i systems.

| Serial no. | Signal designation | Range | Action |
|--------------------------------------|---|--|--------|
| E01 | Welding on | | High |
| E02 | Robot ready | | High |
| E03 | Operating mode bit 0 | See table Value range for operating modes on page 49 | High |
| E04 | Operating mode bit 1 | | High |
| E05 | Operating mode bit 2 | | High |
| E06 | — | | |
| E07 | — | | |
| E08 | — | | |
| E09 | Gas test | | High |
| E10 | Wire forward | | High |
| E11 | Wire backward | | High |
| E12 | Error quit | | High |
| E13 | Position search | | High |
| E14 | Purge welding torch | | High |
| E15 | — | | |
| E16 | — | | |
| E17 - E24 | Job number | 0 to 99 | |
| E25 - E31 | Program number | 1 to 127 | |
| E32 | Welding simulation | | High |
| Only in Job mode (E17 - E32): | | | |
| E17 - E31 | Job number | 0 to 999 | |
| E32 | Welding simulation | | High |
| E33 - E40 | Output set value - Low byte | 0 to 65535 (0 to 100%) | |
| E41 - E48 | Output set value - High byte | | |
| E49 - E56 | Arc length correction, set value Low byte | 0 to 65535 (-30 to +30%) | |
| E57-E64 | Arc length correction, set value High byte | | |
| E65 - E72 | Pulse or dynamic correction | 0 to 255 (-5 to +5%) | |
| E73-E80 | — | | |
| E81 - E88 | — | | |
| E89 - E96 | — | | |

| Serial no. | Signal designation | Range | Action |
|-------------------|-------------------------------|------------------------------------|---------------|
| E97 - E104 | Welding speed - Low byte | 0 to 65535 (0 to 6553.5 cm/min) | |
| E105 - E112 | Welding speed - High byte | | |
| E113 | SynchroPulse on | | High |
| E114 | — | | |
| E115 | — | | |
| E116 | — | | |
| E117 | Output full range (0 to 30 m) | | High |
| E118 | — | | |
| E119 | — | | |
| E120 | — | | |
| E121 - E128 | — | | |
| E129 - E296 | — | | |

Value range for operating modes

| Bit 2 | Bit 1 | Bit 0 | Description |
|--------------|--------------|--------------|------------------------------|
| 0 | 0 | 0 | MIG/MAG Synergic welding |
| 0 | 0 | 1 | MIG/MAG Synergic welding |
| 0 | 1 | 0 | Job mode |
| 0 | 1 | 1 | Internal parameter selection |

Output Signals

The signals listed below are available from firmware V1.6.0 for all Inside/i systems.

| Seq. no | Signal designation | Range | Action |
|----------------|------------------------------------|--------------|---------------|
| A01 | Arc stable | | High |
| A02 | Limit signal | | High |
| A03 | Process active | | High |
| A04 | Main current signal | | High |
| A05 | Welding torch collision protection | | High |
| A06 | Power source ready | | High |
| A07 | Communication ready | | High |
| A08 | Life Cycle Toggle Bit (250ms) | | High |
| A09 - A16 | — | | |
| A17 - A24 | — | | |
| A25 | — | | |

| Seq. no | Signal designation | Range | Action |
|----------------|--|-----------------------------|---------------|
| A26 | — | | |
| A27 | — | | |
| A28 | Wire present | | |
| A29 | Short circuit time exceeded | | High |
| A30 | — | | |
| A31 | — | | |
| A32 | Power out of range | | High |
| A33 - A40 | Welding voltage actual value - Low byte | 0 to 65535 (0 to 100 V) | |
| A41 - A48 | Welding voltage actual value - High byte | | |
| A49 - A56 | Welding current actual value - Low byte | 0 to 65535 (0 to 1000 A) | |
| A57 - A64 | Welding current actual value - High byte | | |
| A65 - A72 | Motor current | 0 to 255 (0 to 5 A) | |
| A73 - A80 | — | | |
| A81 - A88 | — | | |
| A89 - A96 | — | | |
| A97 - A104 | Wire speed - Low byte | 0 to vDmax | |
| A105 - A112 | Wire speed - High byte | | |
| A113 - A120 | — | | |
| A121 - A128 | — | | |
| A129 - A296 | — | | |
